Abstracts

An access point based controller has hardware in the APs that is capable of serving as a controller for a set number of APs. Once an AP has been chosen as the controller, the APs will report to it, and the network is managed by controller in the AP. The upsides to this approach are that no additional controller hardware is needed.
This report elaborates the market size, market characteristics, and market growth of the Access Point and Wi-Fi Controller industry, and breaks down according to the type, application, and consumption area of Access Point and Wi-Fi Controller. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Access Point and Wi-Fi Controller in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
