Abstracts

Acetylene is a highly flammable gas obtained from calcium carbide. Acetylene is manufactured by partial combustion of methane. Acetylene gas is also obtained as byproduct of reaction between calcium carbide and water. Acetylene gas is also produced from hydrocarbon sources such as naphtha, crude oil and coal among others. It is also obtained as a side product in the ethylene stream from cracking of hydrocarbons. Acetylene is colorless and extremely explosive. Acetylene is mainly consumed as a fuel and chemical building block. It is also used in welding and metal cutting and many other brazing applications.

This report elaborates the market size, market characteristics, and market growth of the Acetylene Gas industry, and breaks down according to the type, application, and consumption area of Acetylene Gas. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Acetylene Gas in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
