Abstracts

Acrylic tapes are either water- or solvent-based. They are created by crosslinking monomers to create polymers with specific properties. Acrylic adhesives are naturally tacky so they don't require as many additives during the manufacturing process as rubber adhesives. Offering a good balance of adhesion, shear and tack, tapes with acrylic adhesive systems are resistant to thermal and UV degradation.

This report elaborates the market size, market characteristics, and market growth of the Acrylic Tapes industry, and breaks down according to the type, application, and consumption area of Acrylic Tapes. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Acrylic Tapes in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
