Abstracts

Actuator is a device that converts energy into motion. It is basically used to apply a force to an entity to perform various mechanical operations. It is characterized by a mechanical device that takes energy, created by compressed air, electricity or liquid and converts it into various kind of motion, such as linear and rotary. Actuators are commonly used in industrial or manufacturing applications and are used in devices such as switches, motor, valves, and pumps.

This report elaborates the market size, market characteristics, and market growth of the Actuator industry, and breaks down according to the type, application, and consumption area of Actuator. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Actuator in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
