Abstracts

Adaptive optics (AO) is a technology used to improve the performance of optical systems by reducing the effect of incoming wavefront distortions by deforming a mirror in order to compensate for the distortion. It is used in astronomical telescopes and laser communication systems to remove the effects of atmospheric distortion, in microscopy, optical fabrication and in retinal imaging systems to reduce optical aberrations.

This report elaborates the market size, market characteristics, and market growth of the Adaptive Optics industry, and breaks down according to the type, application, and consumption area of Adaptive Optics. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Adaptive Optics in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
