## Abstracts

Metal additive manufacturing (AM) processes are poised to transform the metal manufacturing industry, particularly in those areas where conventional manufacturing reaches its limitations in terms of both design freedom and manufacturing capabilities. Many metal AM systems are available today, including the powder-bed, powder-fed, and wire-fed processes based on laser, electron beam or plasma melting. At the same time, the variety of metal powder materials suitable for AM continues to expand. This report elaborates the market size, market characteristics, and market growth of the Additive Manufacturing with Metal Powders industry, and breaks down according to the type, application, and consumption area of Additive Manufacturing with Metal Powders. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Additive Manufacturing with Metal Powders in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
