Abstracts

Whole milk powder is a type of dried milk powder made by evaporating moisture content in milk which leaves fine particles of milk solids. Milk and milk products are highly perishable commodities. Milk powder is preserved by removing moisture to the greatest extent possible, which inhibits microbial growth. Shelf life of milk powder is longer than milk due to negligible moisture content. Moreover, milk contains about 80 to 90 percent of moisture, evaporating moisture content in milk reduces its bulk and provides ease of transportation and reduced costs for logistics and supply chain. Adult whole milk powder is suitable for adults.

This report elaborates the market size, market characteristics, and market growth of the Adult Whole Milk Powder industry, and breaks down according to the type, application, and consumption area of Adult Whole Milk Powder.
