Abstracts

An aerobridge is a surrounded moveable or fixed connector which is extended from an airport terminal gate to an aircraft for passenger boarding and disembark from an aircraft. An aerobridge is also known as jetway, airbridge, gangway or skybridge. The aerobridge are attached at one point of the terminal by a pivot and can be moved left or right, raised or lowered, retracted or extended according to the aircraft position and size of the aircraft. The leveling of these aerobridges are controlled by an operator stationed in the cab, which is like a canopy that allows weather proof seal. The major advantages of these aerobridge are they provide all enhanced security operations at the terminals and provide passengers with all-weather dry access during boarding and disembarking the aircraft.

This report elaborates the market size, market characteristics, and market growth of the Aerobridge industry, and breaks down according to the type, application, and consumption area of Aerobridge. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Aerobridge in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
