Abstracts

Aerogel is a synthetic porous ultralight material derived from a gel, in which the liquid component for the gel has been replaced with a gas. The result is a solid with extremely low density and low thermal conductivity. Nicknames include frozen smoke, solid smoke, solid air, solid cloud, blue smoke owing to its translucent nature and the way light scatters in the material. It feels like fragile expanded polystyrene to the touch. Aerogels can be made from a variety of chemical compounds.

This report elaborates the market size, market characteristics, and market growth of the Aerogel Powder industry, and breaks down according to the type, application, and consumption area of Aerogel Powder. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
