Abstracts

The aerostat is a system that uses light gases such as hydrogen, helium, and hot air to lift the aircraft off the ground. In military applications, it supports surveillance, intelligence, and reconnaissance tasks. Design and manufacture of aerostat systems need to consider a series of parameters such as height, payload capacity, operating temperature and wind speed. The aerostat system is a lighter-than-air (LTA) aircraft that is cost-effective and highly maneuverable.

This report elaborates the market size, market characteristics, and market growth of the Aerostat Systems industry, and breaks down according to the type, application, and consumption area of Aerostat Systems. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Aerostat Systems in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
