Abstracts

Agile software development, also known as agile development, is a new approach to software development that has attracted widespread attention since the 1990s. It is a software development feature that meets the needs of fast-changing needs. Their specific names, concepts, processes and terminology are different. Compared with 'non-agile', they emphasize the close cooperation between programmers and business experts, face-to-face communication (think more effective than written documents), and often provide new software versions, compact and self-organizing teams, code writing and Team organization methods that adapt well to changing needs and focus on people's role in the software development process

This report elaborates the market size, market characteristics, and market growth of the Agile Development Software industry, and breaks down according to the type, application, and consumption area of Agile Development Software. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Agile Development Software in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
