## Abstracts

Smoke from chimneys, automobile exhaust, and ruining of fossil fuels are all causing air pollution. As the quality of air continues to degrade, people are switching to anti pollution masks to protect themselves from pollution. Though governments across all countries are constantly passing new norms to combat air pollution (stringent vehicle norms, eradication of pollution chemicals, and relocation of polluting industries), a number of cities are under the constant threat of air pollution with the number of fine particles (known as PM2.5) rising to dangerous levels. Therefore, the credible solution to this problem is a respiratory protection device such as an anti pollution mask that can effectively filter and kill microbes. Anti pollution masks are life savers as polluted air can cause various health issues such as asthma and other air borne diseases.

This report elaborates the market size, market characteristics, and market growth of the Air Pollution Masks industry, and breaks down according to the type, application, and consumption area of Air Pollution Masks. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Air Pollution Masks in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
