## Abstracts

An Purification System or air cleaner is a device which removes contaminants from the air in a room. These devices are commonly marketed as being beneficial to allergy sufferers and asthmatics, and at reducing or eliminating second-hand tobacco smoke. The commercially graded air purifiers are manufactured as either small stand-alone units or larger units that can be affixed to an air handler unit (AHU) or to an HVAC unit found in the medical, industrial, and commercial industries. Air purifiers may also be used in industry to remove impurities such as CO<sub>2</sub> from air before processing. This report elaborates the market size, market characteristics, and market growth of the Air Purification Systems industry, and breaks down according to the type, application, and consumption area of Air Purification Systems. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
