Abstracts

Allantoin is a diureide of glyoxylic acid with the chemical formula $C_4H_6N_4O_3$. It is also called 5-ureidohydantoin or glyoxyldiureide. It is a product of the oxidation of uric acid. It is also a product of purine metabolism in most mammals except for higher apes, and it is present in their urine. In humans, uric acid is excreted instead of allantoin. The presence of allantoin in the urine can be an indication of microbial overgrowth or it can be created via non-enzymatic means through high levels of reactive oxygen species. In this regard, allantoin is sometimes used as a marker of oxidative stress.

This report elaborates the market size, market characteristics, and market growth of the Allantoin industry, and breaks down according to the type, application, and consumption area of Allantoin. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Allantoin in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
