Abstracts

Allergen immunotherapy, also known as desensitization or hypo-sensitization, is a medical treatment for some types of allergies. It is useful for environmental allergies, allergies to insect bites, and asthma. The benefits of oral immunotherapy for food allergies have been demonstrated by successful treatment of thousands of patients both in private practice and in studies for the past few decades, primarily in the United States. Immunotherapy involves exposing people to larger and larger amounts of allergen in an attempt to change the immune system's response.
