Abstracts

Alpha methyl styrene (AMS) refers to a colorless liquid that is used as a co-monomer in a variety of polymerization processes for improving the impact as well as resistance from heat. In several similar applications, it competes with styrene, over which it has some stability and handling benefits. It can also be copolymerized along with monomers which include acrylates, styrene, and benzene.

This report elaborates the market size, market characteristics, and market growth of the Alpha-Methylstyrene (AMS) industry, and breaks down according to the type, application, and consumption area of Alpha-Methylstyrene (AMS). The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Alpha-Methylstyrene (AMS) in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
