## Abstracts

Aluminum powder is a light, silvery-white to gray, odorless powder. It is a reactive flammable material. Moist aluminum powder may ignite in air, with the formation of flammable hydrogen gas. It is also a combustible dust. When aluminum powder comes in contact with water, strong acids, strong bases or alcohols, it releases flammable hydrogen gas. It can react violently or explosively with many inorganic and organic chemicals. Aluminum powder is essentially non-toxic following short-term exposure. This report elaborates the market size, market characteristics, and market growth of the Aluminium Powder and Paste industry, and breaks down according to the type, application, and consumption area of Aluminium Powder and Paste. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Aluminium Powder and Paste in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
