Abstracts

Aluminum is recognized as one of the most energy efficient and sustainable construction materials. Aluminum is especially receptive to today's high-performance, architectural coatings. As a result, the wide variety of factory-applied coatings and colors perform well and stay colorfast. This is a crucial consideration in steep slope roof applications that make the roof a highly visible architectural element. The coatings also help ensure virtually maintenance-free performance and long service life. Aluminum also provides a high degree of radiant heat reflectivity regardless of whether a roof is a low or steep slope. This ability to deflect the sun's heat-generating rays results in less heat transfer to the interior of the building during the summer which, in turn, lowers energy costs by reducing cooling loads.

This report elaborates the market size, market characteristics, and market growth of the Aluminum for Construction industry, and breaks down according to the type, application, and consumption area of Aluminum for Construction. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Aluminum for Construction in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
