Abstracts

Aluminium chlorohydrate is a group of specific aluminium salts having the general formula $Al_nCl_{(3n-m)}(OH)_m$. It is used in cosmetics as an antiperspirant and as a coagulant in water purification. In water purification, this compound is preferred in some cases because of its high charge, which makes it more effective at destabilizing and removing suspended materials than other aluminium salts such as aluminium sulfate, aluminium chloride and various forms of polyaluminium chloride and polyaluminium chlorisulfate, in which the aluminium structure results in a lower net charge than aluminium chlorohydrate.

This report elaborates the market size, market characteristics, and market growth of the Aluminum Chlorohydrate industry, and breaks down according to the type, application, and consumption area of Aluminum Chlorohydrate. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Aluminum Chlorohydrate in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
