Abstracts

Aluminum doped Zinc Oxide (AZO) is a highly insoluble thermally stable Aluminum source suitable for glass, optic and ceramic applications. Oxide compounds are not conductive to electricity. However, certain perovskite structured oxides are electronically conductive finding application in the cathode of solid oxide fuel cells and oxygen generation systems. They are compounds containing at least one oxygen anion and one metallic cation. They are typically insoluble in aqueous solutions (water) and extremely stable making them useful in ceramic structures as simple as producing clay bowls to advanced electronics and in light weight structural components in aerospace and electrochemical applications such as fuel cells in which they exhibit ionic conductivity.

This report elaborates the market size, market characteristics, and market growth of the Aluminum Doped Zinc Oxide industry, and breaks down according to the type, application, and consumption area of Aluminum Doped Zinc Oxide. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
