Abstracts

In computer science, Analysis Software is the process of automatically analyzing the behavior of computer programs regarding a property such as correctness, robustness, safety and liveness. Analysis Software focuses on two major areas: program optimization and program correctness. The first focuses on improving the program's performance while reducing the resource usage while the latter focuses on ensuring that the program does what it is supposed to do. Program analysis participates to Software Intelligence by allowing to provide information used in the mastering and understanding of software systems.

This report elaborates the market size, market characteristics, and market growth of the Analysis Software industry, and breaks down according to the type, application, and consumption area of Analysis Software. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Analysis Software in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
