Abstracts

An analytical balance (often called a 'lab balance') is a class of balance designed to measure small mass in the sub-milligram range. The measuring pan of an analytical balance (0.1 mg or better) is inside a transparent enclosure with doors so that dust does not collect and so any air currents in the room do not affect the balance's operation. This enclosure is often called a draft shield.

This report elaborates the market size, market characteristics, and market growth of the Analytical Balances industry, and breaks down according to the type, application, and consumption area of Analytical Balances. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Analytical Balances in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
