Abstracts

Anc Headset, also known as active noise-cancelling headphones or noise-cancelling headphones, are headphones that eliminate the unpleasant sounds around them by active noise control. The principle is to use more than one microphone close to the ear to receive external noise, and to generate a signal with the opposite phase of the noise sound wave by the electronic circuit. When this anti-reflection signal is generated, the destructive interference eliminates the outside noise that the wearer can hear.

This report elaborates the market size, market characteristics, and market growth of the Anc Headset industry, and breaks down according to the type, application, and consumption area of Anc Headset. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
