Abstracts

Android POS is a service that allows users to use their mobile terminals (usually mobile phones) to pay for goods or services they consume. The unit or individual sends the payment instruction directly or indirectly to the banking financial institution through the mobile device, the Internet or proximity sensing to generate the money payment and the fund transfer behavior, thereby realizing the mobile payment function. Mobile payment combines terminal equipment, the Internet, application providers, and financial institutions to provide users with financial services such as money payment and payment.

This report elaborates the market size, market characteristics, and market growth of the Android POS industry, and breaks down according to the type, application, and consumption area of Android POS. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Android POS in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
