Abstracts

The absorption of carbon dioxide is mandatory in closed and semi-closed circle breathing systems. The elimination of CO₂ from exhaled gases is achieved through chemical neutralization in transparent canisters containing absorbent granules. The ideal CO₂ absorbent should have high efficiency, low airflow resistance, no toxicity or reactions with inhalation anesthetics, and low cost. Effective carbon dioxide absorption prevents CO₂ rebreathing and the development of hypercapnia.

This report elaborates the market size, market characteristics, and market growth of the Anesthesia Co₂ Absorbent industry, and breaks down according to the type, application, and consumption area of Anesthesia Co₂ Absorbent. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
