Abstracts

Anesthesia information management systems (AIMS) collect patient data digitally and use it to facilitate the anesthesia management of patients. AIMS are installed on a variety of hardware setups ranging from a simple laptop-like clinical workstation to more advanced and expensive touch-screen-based systems. All AIMS require networking between a central server used to store patient data and client side workstations within each operating room that link up to monitors and delivery machines to collect data. This report elaborates the market size, market characteristics, and market growth of the Anesthesia Information Management Systems industry, and breaks down according to the type, application, and consumption area of Anesthesia Information Management Systems. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
