Abstracts

Animated Films are ones in which individual drawings, paintings, or illustrations are photographed frame by frame (stop-frame cinematography). Usually, each frame differs slightly from the one preceding it, giving the illusion of movement when frames are projected in rapid succession at 24 frames per second. The earliest cinema animation was composed of frame-by-frame, hand-drawn images. When combined with movement, the illustrator's two-dimensional static art came alive and created pure and imaginative cinematic images - animals and other inanimate objects could become evil villains or heroes.

This report elaborates the market size, market characteristics, and market growth of the Animated Films industry, and breaks down according to the type, application, and consumption area of Animated Films. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Animated Films in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
