Abstracts

High extent of vibration can cause significant destruction to machinery in the long run. Therefore, vibration isolation is essential to help improve the functioning of machines for longer duration. Rubber products are primarily used to avoid the transmission of vibration that a machine produces. These products act as isolating pads and absorb vibrations. Isolating pads stop vibrations from being transferred to adjacent machines and structures. These rubber products are known as anti-vibration mounts, isolation mounts, and vibration damping materials and are available in various configurations. This report elaborates the market size, market characteristics, and market growth of the Anti Vibration Rubber Mounts industry, and breaks down according to the type, application, and consumption area of Anti Vibration Rubber Mounts. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Anti Vibration Rubber Mounts in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
