Abstracts

Antifouling coatings are coatings used to prevent sea creatures from adhering, eroding, and fouling, and to maintain water-immersing structures such as ships, docks, and sonar. It consists of paints, poisons, pigments, solvents and additives. Applying on the rust-preventing primer, it slowly oozes out with the poison in the coating, forming a toxic surface layer on the surface of the coating film, and killing marine organisms such as barnacles, limestone, etc. attached to the coating film.

This report elaborates the market size, market characteristics, and market growth of the Antifouling Coatings industry, and breaks down according to the type, application, and consumption area of Antifouling Coatings. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
