Abstracts

Application lifecycle management (ALM) is the product lifecycle management (governance, development, and maintenance) of computer programs. It encompasses requirements management, software architecture, computer programming, software testing, software maintenance, change management, continuous integration, project management, and release management

Application Lifecycle Management (Alm) Software is a software tool that uses computer-aided software engineering. An organization usually produces software for multiple customers, and the requirements of customers are diverse. A software life cycle often does not fit all situations, so organizations can specify more and can be modified to suit the organization. When developing a project definition software process, the process management method helps to reduce the artificial development caused by the software development process, especially for the development of large-scale applications.

This report elaborates the market size, market characteristics, and market growth of the Application Lifecycle Management (ALM) Software industry, and breaks down according to the type, application, and consumption area of Application Lifecycle Management (ALM) Software. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Application Lifecycle Management (ALM) Software in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
