Abstracts

Aptamers are oligonucleotides or peptide molecules that bind to target lipid, protein, or nucleic acid molecules with high specificity. Aptamers are generated rapidly and applied in the inhibition, specific detection, and characterization of proteins. Aptamers can be used as detection reagents, pharmaceutical leads, and functional proteomic levels with antibodies, small molecules, and other aptamers.

This report elaborates the market size, market characteristics, and market growth of the Aptamers industry, and breaks down according to the type, application, and consumption area of Aptamers. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
