Abstracts

Aromatic compounds, also known as arenes or aromatics, are chemical compounds that contain conjugated planar ring systems with delocalized pi electron clouds instead of discrete alternating single and double bonds. Typical aromatic compounds are benzene and toluene. An aromatic compound is any compound that contains a benzene ring or has certain benzene-like properties (but not necessarily a strong aroma).

This report elaborates the market size, market characteristics, and market growth of the Aromatic Compounds industry, and breaks down according to the type, application, and consumption area of Aromatic Compounds. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Aromatic Compounds in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
