Abstracts

Artificial intelligence (AI), the ability of a digital computer or computer-controlled robot to perform tasks commonly associated with intelligent beings.

Artificial intelligence is technology that appears to emulate human performance typically by learning, coming to its own conclusions, appearing to understand complex content, engaging in natural dialogs with people, enhancing human cognitive performance (also known as cognitive computing) or replacing people on execution of nonroutine tasks. Applications include autonomous vehicles, automatic speech recognition and generation and detecting novel concepts and abstractions (useful for detecting potential new risks and aiding humans quickly understand very large bodies of ever changing information).

This report elaborates the market size, market characteristics, and market growth of the Artificial Intelligence (AI) industry, and breaks down according to the type, application, and consumption area of Artificial Intelligence (AI). The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
