Abstracts

Assistive technology is an umbrella term that includes assistive, adaptive, and rehabilitative devices for people with disabilities while also including the process used in selecting, locating, and using them. People who have disabilities often have difficulty performing activities of daily living (ADLs) independently, or even with assistance. ADLs are self-care activities that include toileting, mobility (ambulation), eating, bathing, dressing and grooming. Assistive technology can ameliorate the effects of disabilities that limit the ability to perform ADLs. Assistive technology promotes greater independence by enabling people to perform tasks they were formerly unable to accomplish, or had great difficulty accomplishing, by providing enhancements to, or changing methods of interacting with, the technology needed to accomplish such tasks. This report elaborates the market size, market characteristics, and market growth of the Assistive Technology for Elder industry, and breaks down according to the type, application, and consumption area of Assistive Technology for Elder. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
