Abstracts

An asynchronous motor, also called an induction motor, is an alternating current motor. The stator coil uses electromagnetic induction to generate current to the rotor, and the motor produces torque, so no permanent magnets are needed. Asynchronous motors can be divided into winding cages and squirrel cages in the form of rotor windings. The winding type is a three-phase motor, and the squirrel cage type has a three-phase motor and a single-phase motor. The rotor of the squirrel cage induction motor can be connected to circuitry external to the motor.

This report elaborates the market size, market characteristics, and market growth of the Asynchronous Motor industry, and breaks down according to the type, application, and consumption area of Asynchronous Motor. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Asynchronous Motor in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
