## Abstracts

Atherectomy is a procedure used to clean out clogged heart arteries. An atherectomy catheter has a hollow cylinder on the tip with an open window on one side and a balloon on the other. When the catheter is inserted into the narrowed artery, the balloon is inflated, pushing the window against the fatty matter clogging the vessel. A blade (cutter) within the cylinder rotates and shaves off any fat that protrudes into the window. The shavings are caught in a chamber within the catheter and removed. This process is repeated as needed to allow better blood flow.

This report elaborates the market size, market characteristics, and market growth of the Atherectomy Devices industry, and breaks down according to the type, application, and consumption area of Atherectomy Devices. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
