Abstracts

Headphones are regularly used by audiophiles. These products can be remarkably expensive, some over \$10,000,[14] but in general are much cheaper than comparable speaker systems. They have the advantage of not requiring room treatment, and being usable without requiring others to listen at the same time. Newer canalphones can be driven by the less powerful outputs found on portable music players.

This report elaborates the market size, market characteristics, and market growth of the Audiophile Headphone industry, and breaks down according to the type, application, and consumption area of Audiophile Headphone.
