Abstracts

Automated mine scanning machines are equipped with a vision system and advanced sensor fusion technology. This advancement in technology makes the machines efficient to be incorporated in the underground mining operation. With the integration of Internet-of-Things, cloud computing, and big data, these machines are implemented beneath the land surface to capture the data precisely. Moreover, the accessibility of data transmission and communication between operators and mining labors is not possible through manual operations. However, with the implementation of advanced automation and machines, data capture and transmission have improved. The improvements have also enabled the underground mining data to be captured with fewer complications and high precision through the implementation of automated mine scanning machines.
This report elaborates the market size, market characteristics, and market growth of the Automated Mine Scanning Machines industry, and breaks down according to the type, application, and consumption area of Automated Mine Scanning Machines. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Automated Mine Scanning Machines in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
