Abstracts

Automated Parking Systems are mechanical systems designed to minimize the area and/or volume required for parking cars. Like a multi-story parking garage, an automated parking system provides parking for cars on multiple levels stacked vertically to maximize the number of parking spaces while minimizing land usage. The automated parking system, however, utilizes a mechanical system to transport cars to and from parking spaces (rather than the driver) in order to eliminate much of the space wasted in a multi-story parking garage. While a multi-story parking garage is similar to multiple parking lots stacked vertically, an automated parking system is more similar to an automated storage and retrieval system for cars.

This report elaborates the market size, market characteristics, and market growth of the Automated Parking Systems industry, and breaks down according to the type, application, and consumption area of Automated Parking Systems. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Automated Parking Systems in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
