Abstracts

Unit testing consumes a larger percentage of share of resources of quality assurance (QA) and in order to simplify the testing efforts, automated testing software is used involving testing to be done with minimum scripts. The automated testing software is used for executing tests, creating reports and comparing results. The automated testing software is extremely useful for regression testing, which is a time consuming and extremely tedious process. Additional benefits offered by automated testing software is environment simulation where testing software can be replicated to create user environment where GUI response is created and analyzed.
