Abstracts

Automated feeding systems are the modern-day systems to feed the domestic animals. These systems are majorly used in the livestock feeding management. The operation is usually carried out by automated robots and other advanced machineries which go near the livestock and their little ones to feed them with their daily meal, milk and other foodstuffs. Automatic feeding systems save time and cost carrying out a variety of tasks that includes storing different feed components individually, to mixing the feed and even distributing it onto the feeding table.

This report elaborates the market size, market characteristics, and market growth of the Automatic Feeding System industry, and breaks down according to the type, application, and consumption area of Automatic Feeding System. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
