Abstracts

Automatic identification system or AIS is a specialized tracking system which functions automatically and are used for avoiding collision on ships by the vessel traffic services. Information provided by AIS supplements marine radar forming one the primary method for avoiding collision among water transport. AIS equipment provides information that includes unique identification, course, speed and position that gets displayed on screen.

This report elaborates the market size, market characteristics, and market growth of the Automatic Identification Systems (AIS) industry, and breaks down according to the type, application, and consumption area of Automatic Identification Systems (AIS). The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
