Abstracts

The die-casting mold is a method of casting liquid die forging, a process performed on a dedicated die-casting die forging machine. The basic process is: the metal liquid is first filled into the cavity of the mold by low speed or high speed casting, and the mold has a movable cavity surface, which is pressed and forged with the cooling process of the molten metal, thereby eliminating the shrinkage of the blank. The loose defect also causes the internal structure of the blank to reach the forged broken grain. The overall mechanical properties of the blank are significantly improved.

This report elaborates the market size, market characteristics, and market growth of the Automobile Die Casting Mould industry, and breaks down according to the type, application, and consumption area of Automobile Die Casting Mould. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Automobile Die Casting Mould in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
