Abstracts

Adaptive Front Lighting System (AFS) is a part of the active safety system of a middle-high end passenger car that provides an optimized vision to the driver during night time other poor-sight conditions of the road. This is done by adapting the headlight angle or intensity, and judging the speed of the car, the steering wheel angle, the weather condition. Adaptive Front-lighting System in vehicles optimize distribution of light from the headlights, according to driving circumstances. Depending on vehicle speed and steering input, the system points the low-beams headlights in the direction the driver intends to travel.
