Abstracts

Stamping is the process of placing flat sheet metal in either blank or coil form into a stamping press where a tool and die surface forms the metal into a net shape. Stamping includes a variety of sheet-metal forming manufacturing processes. The body shop is where all the sheet metal components are assembled to form the metal body which is then sent to the paint shop. Lastly, the painted body is then sent to final operations, where the drivetrain, dashboard, and all interior & external components are installed to complete the vehicle. The stamping plant's capability is extremely important as it may be supporting several plants vehicle programs.

This report elaborates the market size, market characteristics, and market growth of the Automotive Body Stampings industry, and breaks down according to the type, application, and consumption area of Automotive Body Stampings. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
