## Abstracts

Automotive brake friction products consist of all the components that assist in either stopping or reducing the speed of the vehicle. Automotive brake friction products comprise various products, such as a brake pad, brake drum, brake shoe, disc and liner. Usually, a brake pad consists of an asbestos or a semi steel plated back facing the brake disc. They convert the kinetic energy of the vehicle into mechanical energy and assist the vehicle in stopping. Moreover, in disc brake systems, two brake pads are contained in a caliper that is mounted on the disc. In case of drum brakes, brake friction products, such as a brake shoe, push outward and stop the rotating motion of the brake drum.

This report elaborates the market size, market characteristics, and market growth of the Automotive Brake Friction Product industry, and breaks down according to the type, application, and consumption area of Automotive Brake Friction Product. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Automotive Brake Friction Product in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
