Abstracts

Automotive ECU or Electronic Control Unit is a family of computer systems that controls and maintains the entirety of electronic, electrical and mechanical systems of a vehicle. ECU can be classified based on the functions such as Engine Control Module (ECM), Body Control Module (BCM), Electronic Brake Control Module (EBCM), Powertrain Control Module (PCM), Transmission Control Module (PCM), Suspension Control Module (SCM), Door Control Unit (DCM), Battery Management System (BMS), General Electric Module (GEM) and others. Automotive functions ranging from the movement of the windows to the amount of air-fuel mixture required for each engine cylinder has an ECU system embedded with it which is recorded, analyzed and stored in the microcontroller. Technological advancements in automotive technology has led to an increase in implementation of complex ECUs in a vehicle. Some of the automobile models running today on the roads have more than 80 different ECUs present in it. This report elaborates the market size, market characteristics, and market growth of the Automotive Door ECU industry, and breaks down according to the type, application, and consumption area of Automotive Door ECU. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
