Abstracts

It means that the total layout of the car is that all the wheels are drive wheels. Generally, the engine is installed in the steam. The front of the car (and some in the middle of the car) drives all the wheels through the drive train. The all-wheel drive can distribute the engine output torque to all the wheels on the front and rear according to different driving road conditions to improve the driving ability of the car. Since all the wheels are drive wheels, the full adhesion quality of the car is fully utilized, so the car has a large driving force and the ability to overcome obstacles and prevent slipping.

This report elaborates the market size, market characteristics, and market growth of the Automotive Multi-Wheel Drive Equipment industry, and breaks down according to the type, application, and consumption area of Automotive Multi-Wheel Drive Equipment. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
