Abstracts

An automotive navigation system is part of the automobile controls or a third party add-on used to find direction in an automobile. It typically uses a satellite navigation device to get its position data which is then correlated to a position on a road. When directions are needed routing can be calculated. On the fly traffic information can be used to adjust the route.

This report elaborates the market size, market characteristics, and market growth of the Automotive Navigation System industry, and breaks down according to the type, application, and consumption area of Automotive Navigation System. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
