## Abstracts

Automotive powertrains include all the major components that generate power and deliver it to the road or the ground. The components included in the powertrain are the engine, the transmission, the drive shaft, the differential and the drive wheels. In hybrid vehicles, batteries, motors and control algorithms also form part of the powertrain. Continuous innovation pressure and shorter development cycles are a major challenge in the development of modern automotive power systems.

This report elaborates the market size, market characteristics, and market growth of the Automotive Powertrain Testing industry, and breaks down according to the type, application, and consumption area of Automotive Powertrain Testing. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Automotive Powertrain Testing in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
